MMS-EASE *Lite*: IEC61850 for Embedded Systems

MMS-EASE *Lite*

MMS-EASE *Lite* is a source code package for the Manufacturing Message Specification (MMS) protocols, and IEC61850 (UCA™ V2.0) that has been optimized for use in Intelligent Electronic Devices (IEDs) such as RTUs, reclosers, PLCs, meters and other resource constrained embedded applications. MMS-EASE *Lite* gives the OEM a jump start on developing IEC61850 and MMS compliant devices by significantly reducing the engineering effort it takes to build a compatible device interface. MMS-EASE *Lite* is an efficient and portable implementation of the following protocols that are ready to adapt into your IED:

- **UCA** - per **IEC61850** with support for GOOSE, GSSE, and SCL including parts 6-1, 7-2, 7-3, 7-4, and 8-1.
- **MMS** - per ISO 9506 Version 1 and 2
- **ACSE** - Association Control Service Elements per ISO 8650
- **Presentation** layer per ISO 8823 and ISO9576
- **Session** layer per ISO 8327 and ISO9548
- **Transport** - Connection Oriented Class 4 Transport per ISO 8073 and ISO connectionless transport protocol per ISO 8602
- **Network** - ISO Connectionless Network Protocol per (CLNP) per ISO 8473 and End-System to Intermediate-System (ES-IS) routing protocol per ISO 9542
- **LLC** - Logical Link Control class 1 per ISO 8802
- **TCP/IP** - using RFC1006 (TCP/IP not included)
- **IEEE802.3** - Ethernet

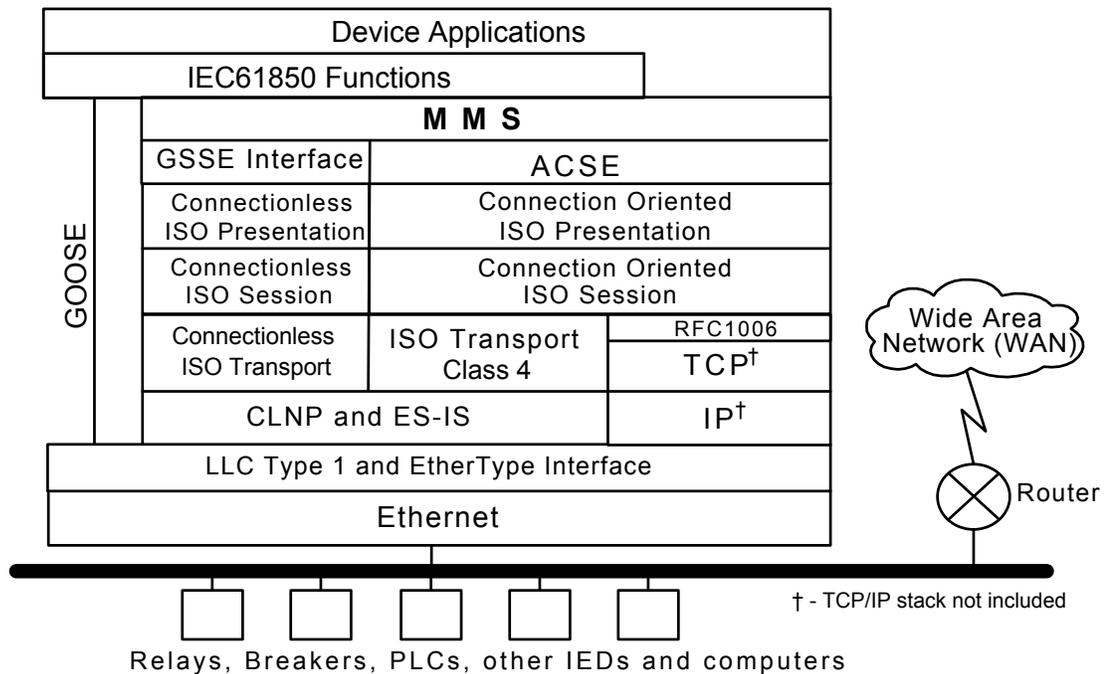

Benefits

- Field Proven implementation reduces development risk, minimizes development effort and shortens time to market.
- MMS Object Foundry automates much of the programming needed to implement IEC61850 compliant devices and objects.
- Designed specifically for embedded environments to minimize CPU and memory requirements and to maximize performance.
- ANSI C source code is provided for all functions to facilitate portation to virtually any environment.
- Flexible licensing options available to satisfy the diverse needs of the OEM developer.

MMS-EASE *Lite* Features/Specifications

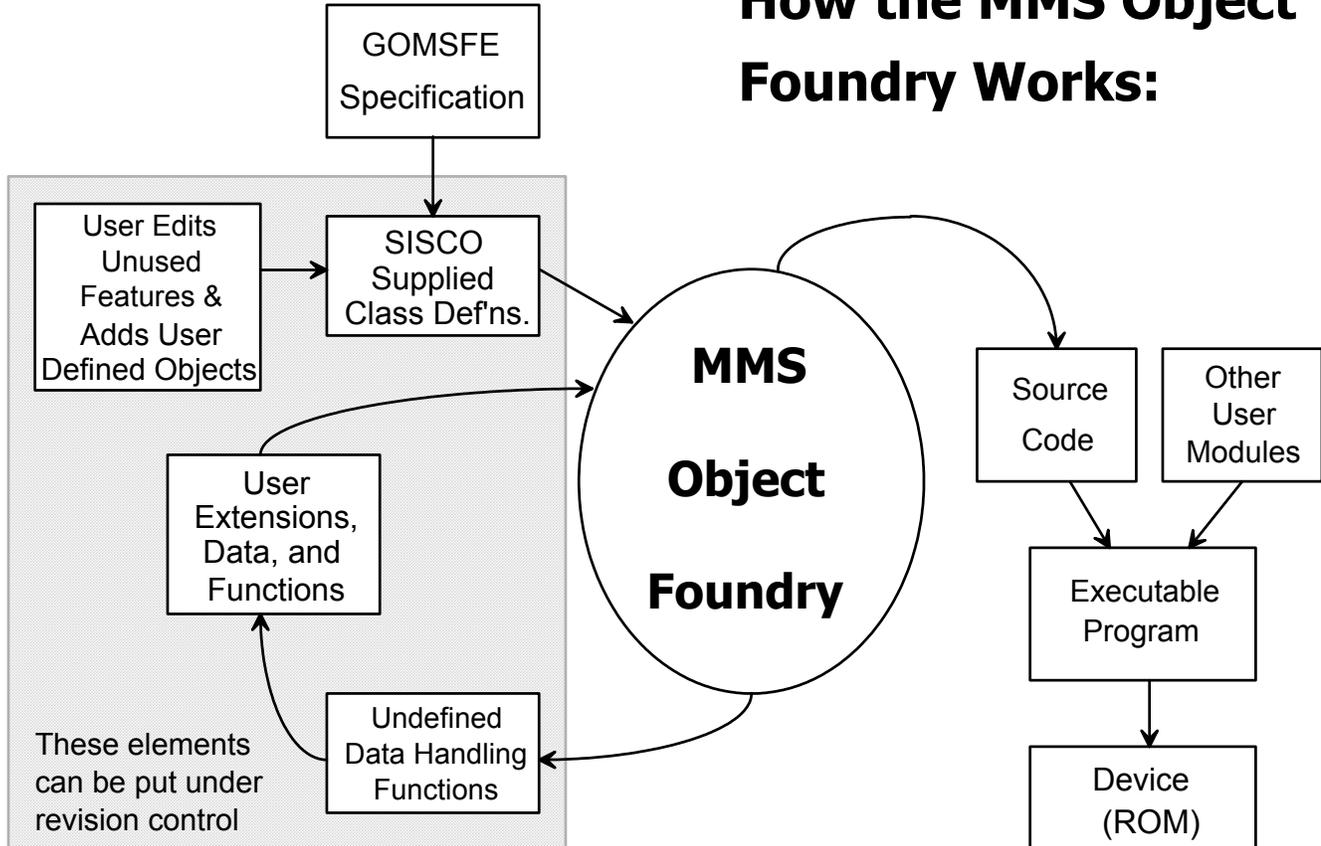

• KEY TECHNICAL FEATURES:

- ▶ Synchronous and asynchronous message processing supported
 - ▶ Connection oriented profiles support up to 1000 associations.
 - ▶ Supports static object definition via the exclusive SISCO MMS Object Foundry.
 - ▶ Supports dynamic (run-time) object creation via Substation Configuration Language (SCL per IEC61850-6-1) encoded XML.
 - ▶ Supports IEC61850 data, logical node and object definitions per parts 7-2, 7-3, & 7-4.
 - ▶ Supports IEC61850 Abstract Communication Service Interface (ACSI) functions per part 7-2.
 - ▶ Support for UCA V2.0 Common Application Service Model (CASM) and Generic Object Models for Substation and Feeder Equipment (GOMSFE) per IEEE TR1550.
 - ▶ Supports all MMS services for both client and server per ISO 9506 Version 1 (1988).
 - ▶ Supports all MMS ISO9506 Version 2 features required for IEC61850.
 - ▶ "Minimal" implementation techniques provide highly efficient memory usage.
- MMS-EASE *Lite* includes a MMS Virtual Lite (MVL) framework that helps ease the development effort by providing functions for:
 - ▶ Automation of common MMS message processing for commonly used services.
 - ▶ Translating to/from local data formats.
 - ▶ GOOSE/GSSE multi-cast messages.
 - ▶ Handling IEC61850 buffered and un-buffered reporting.
 - MMS Object Foundry can be used to automatically generate MVL code for objects and devices conforming to IEC61850-7-3, 7-4 and UCA Generic Object Models for Substation and Feeder Equipment (GOMSFE).
- Source code and other files used by MMS-EASE *Lite* can be used with existing revision control systems and other development tools.
 - Source code is user manageable and modifiable. Users of MMS-EASE *Lite* are not dependent on SISCO for changes.
 - Complete, well commented, and human readable source code is provided for all supported functions using standard ANSI C constructs and function prototypes.
 - Software is modular to facilitate portation to other environments. SISCO, or existing users of MMS-EASE *Lite*, have ported to PharLap ETS, QNX, VxWorks, pSOS, Linux, "Home-Brew" O/S. Portable to any O/S supporting ANSI C compiler
 - Portation services to other environments are available from SISCO upon request.
 - Flexible memory management architecture:
 - ▶ Supports ROM based systems.
 - ▶ Static user-managed memory pool or dynamic memory allocation.
 - Available in two separate communications bundles to meet differing needs:
 - ▶ With upper layers only for TCP/IP (does not include GOOSE/GSSE)
 - ▶ Complete support for both ISO/OSI and TCP/IP transport with GOOSE/GSSE.
 - Flexible source code licensing:
 - ▶ Royalty based license
 - ▶ Single project license
 - ▶ Paid-up, no royalty license
 - ▶ Steep quantity discounts on royalties
 - Consulting/training programs get your development team productive quickly.
 - Comprehensive product support and maintenance package included for the first year. Yearly renewal available.

MMS-EASE *Lite* Architecture and Application

How the MMS Object Foundry Works:

Other products from SISCO

- **ICCP-TASE.2 Extensions for MMS-EASE *Lite*** adds support for the Intercontrol Center Communications Protocol (ICCP per IEC60870-6 TASE.2) to MMS-EASE *Lite*. Enables simultaneous communications with MMS, IEC61850, and ICCP-TASE.2 over the same physical network connection.
- **AX-S4 MMS** ("access for MMS") is an IEC61850 client application that provides "plug-in" access to IEC61850 for any Windows compatible application that supports an OLE for Process Control (OPC) interface. AX-S4 MMS includes SISCO's MMS Object Explorer that allows you to visually interact with IEC61850/MMS devices and objects. AX-S4 MMS can be combined with off-the-shelf Windows based SCADA/HMI and testing products to both test your MMS-EASE *Lite* based device and provide a low-cost method for your customers to integrate your IEC61850 devices and applications in their systems.

About SISCO

SISCO is a supplier of real-time communications technology for clients in the energy utility industries. SISCO works in partnership with many of the leading OEMs in these industries to deliver cost-effective, robust, standards based real-time communications solutions for their customers. SISCO capabilities include:

- MMS technology supporting substation automation per IEC61850.
- Intercontrol Center Communications Protocol (ICCP) per IEC 60870-6 TASE.2
- Support for the Common Information Model (CIM) and the Generic Interface Definition (GID) per IEC61970 and IEC61968 for a model driven application integration architecture via the Utility Integration Bus (UIB).
- Add-on products for the OSIsoft™ PI enterprise data server product line.
- Application development and product customization, training and integration services
